

POND CARE PACKAGE

<p style="text-align: center;">Pond Colorant</p>  <p>Enrich the visual appeal of your pond with this non-toxic colorant. The blue shading also reduces sunlight penetration, thereby limiting photosynthesis and related algae growth.</p>	<p style="text-align: center;">MacroZyme Beneficial Bacteria</p>  <p>This beneficial bacteria prompts the decomposition of organic matter on the pond bottom (from animal waste, grass clippings, leaves, and fertilizer runoff) to reduce the nutrients available for algae growth, while increasing available oxygen levels and improving water clarity.</p>	<p style="text-align: center;">Barley Straw Pellets</p>  <p>Research of decaying barley straw bales in ponds shows the process helps in balancing water quality. Peroxide is created, limiting more algae growth. Barley pellets are natural as well as easy & clean to apply. The pellets decompose quickly and work through the season.</p>
<p style="text-align: center;">Directions:</p> <p>The innermost bag with the powder dye is water-soluble and should not be cut open. Remove the outer packaging and toss the packet into the pond. Multiple bags can be tossed in different locations. May take overnight to mix throughout the pond.</p>	<p style="text-align: center;">Directions:</p> <p>Apply when the water temp is 55°. Should be added monthly during the warm months (June, July, Aug). Cut open the outer bag with labeling & toss in the inner water-soluble bags in multiple locations.</p>	<p style="text-align: center;">Directions:</p> <p>Apply generally once or twice (if needed or desired) a season. Broad-cast the pellets a distance into the pond, walking or boating around the perimeter.</p>
